## CONVENIENT, QUALITY CARE FOR YOUR KEIKI

From birth through adolescence, we take care of Hawaii's keiki and help them thrive through adulthood.

### Holistic approach to care

At Kaiser Permanente, we care for our young members using an integrated, multidisciplinary approach. This integration allows the entire patient care team to access and understand the individual needs of each of our members.

### Convenient care for busy families

Most of our facilities have all the services you need in one place; such as, primary care, pharmacy, X-ray, and lab. When your child is sick or injured, you have the convenience of same-day appointments, phone appointments, or emailing your child's doctor's office anytime. We also have medical advice and care guidance 24-hours a day, seven days a week.

### A team of top-notch doctors

Our board-certified Pediatricians and Family Medicine doctors are committed to the health and well-being of children and teens. We hand-select top doctors who are committed to world-class medicine and compassionate care for your keiki.

We also offer a wide-variety of specialty services to support our young members growth and development. Whether your child experiences allergies, asthma, Attention Deficit Hyperactivity Disorder (ADHD) or diabetes, we've got them covered. In addition, we offer classes to support parents and help them build strong relationships with their keiki from newborn (including breast-feeding consultations) through the teen years.

### Supporting budding athletes

Our sports medicine and physical therapy specialties support young athletes when they're injured and are self-referral on Oahu. We offer injury prevention advice and techniques to enhance athletic performance to help young athletes lead an active and healthy lifestyle.

### Easy online access

For busy parents, the ability to manage your child's health online can be a huge time saver. With Kaiser Permanente, you can make appointments online or with our app, view your child's health records, email your child's doctor, and refill prescriptions.
